

Enterprise Strategic Architectures : TOGAF and Zachman

Contents

Enterprise Architecture

- What is EA ?
- What are it's layers ?

EA Business Drivers

- Speedier decision making
- Reduction in time-to-market
- Reduction in costs

TOGAF

- TOGAF components

Zachman

- Zachman components

Benefits to Architects

- Makes job easier
- Saves time

What is an Enterprise Architecture (EA)

Enterprise Architecture

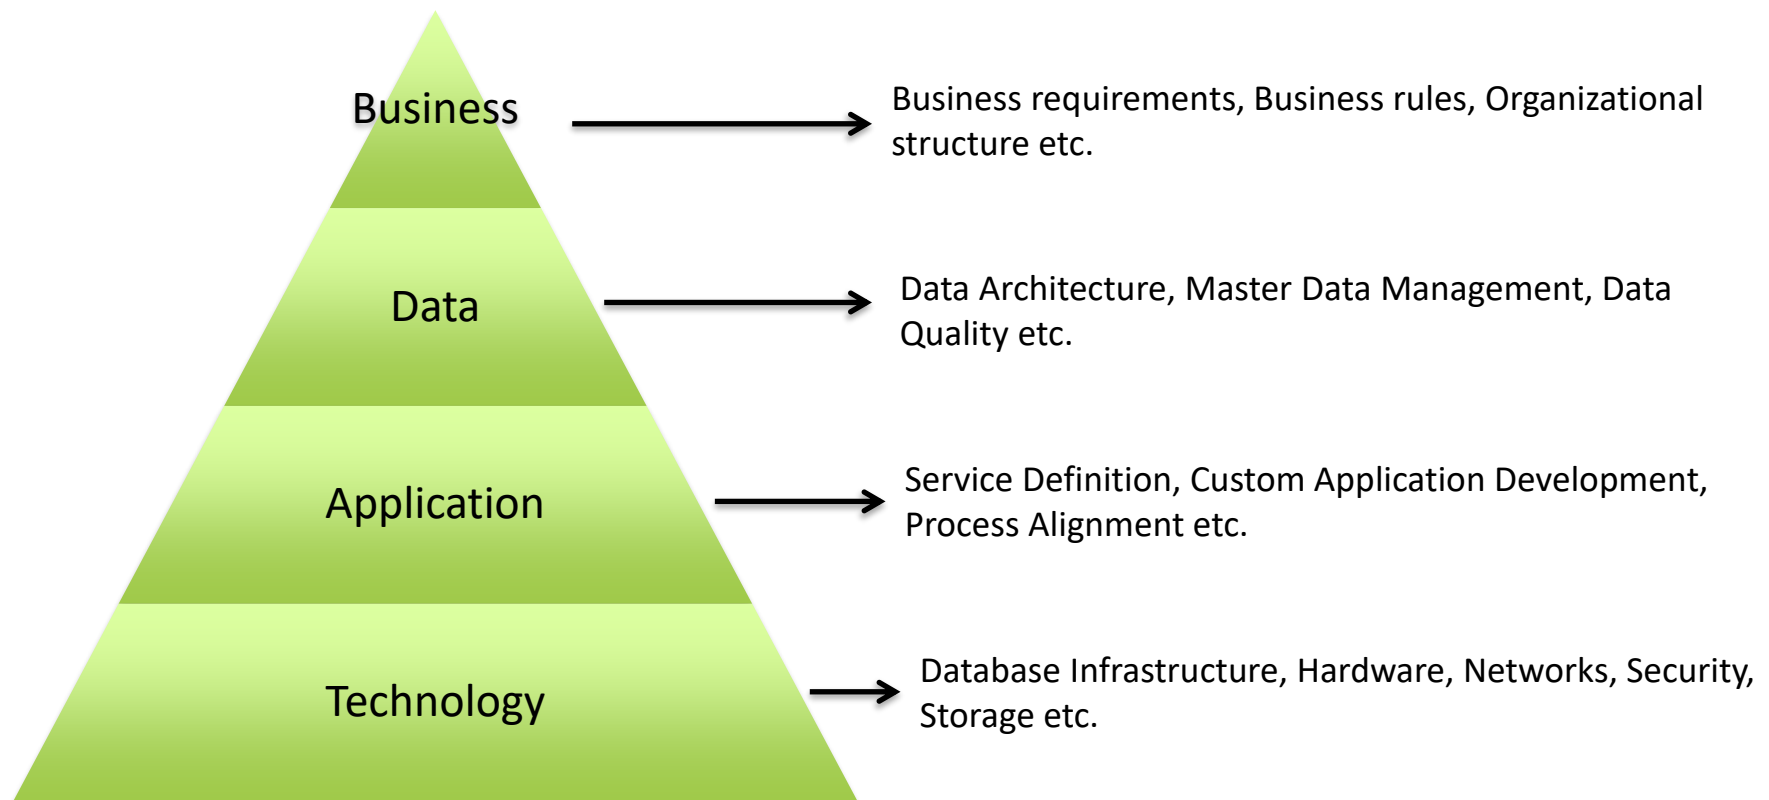

EA Business Drivers

TOGAF

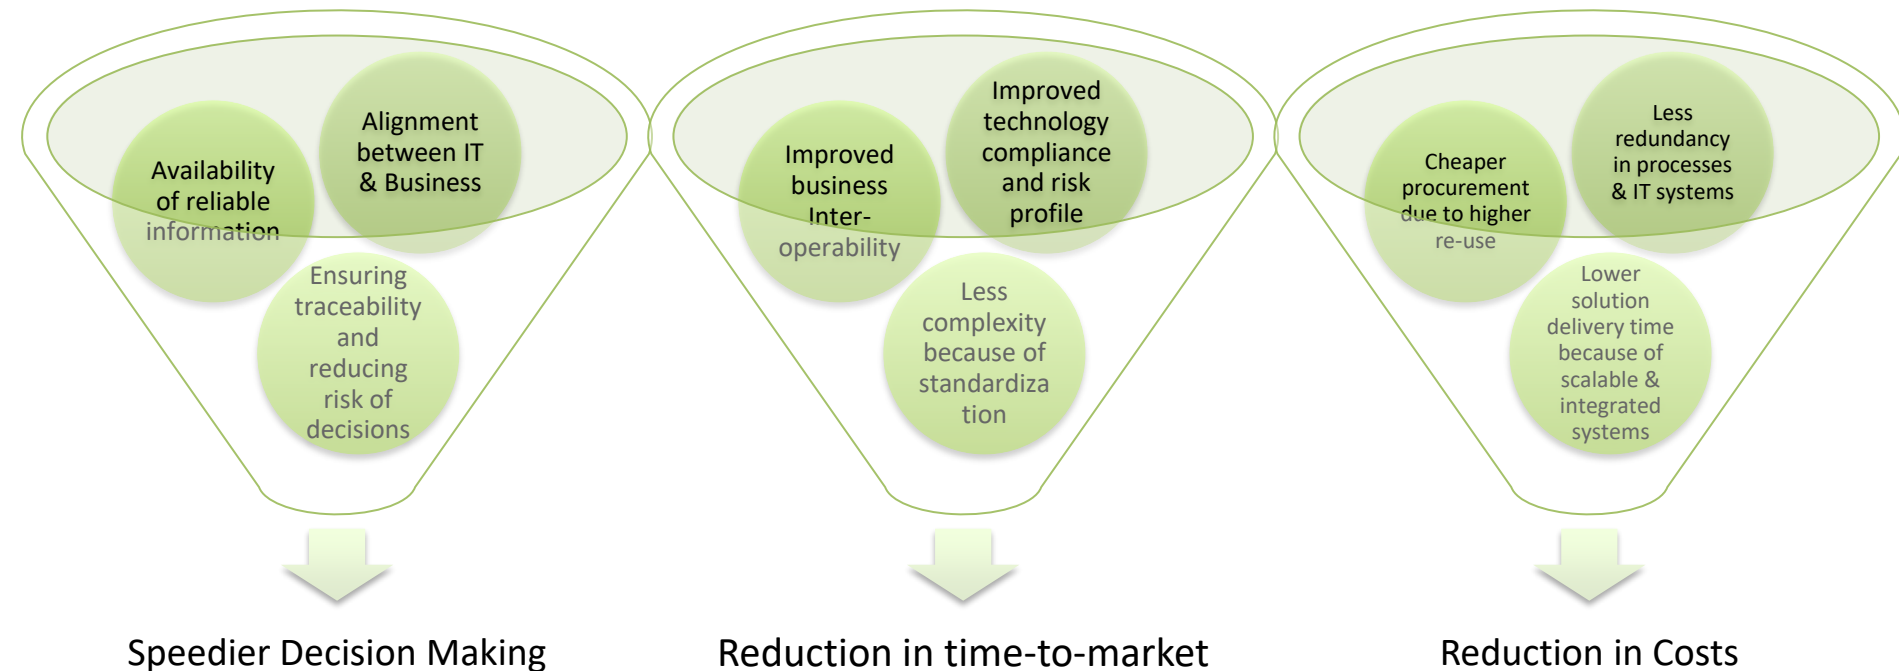

Zachman

Benefits to Architects

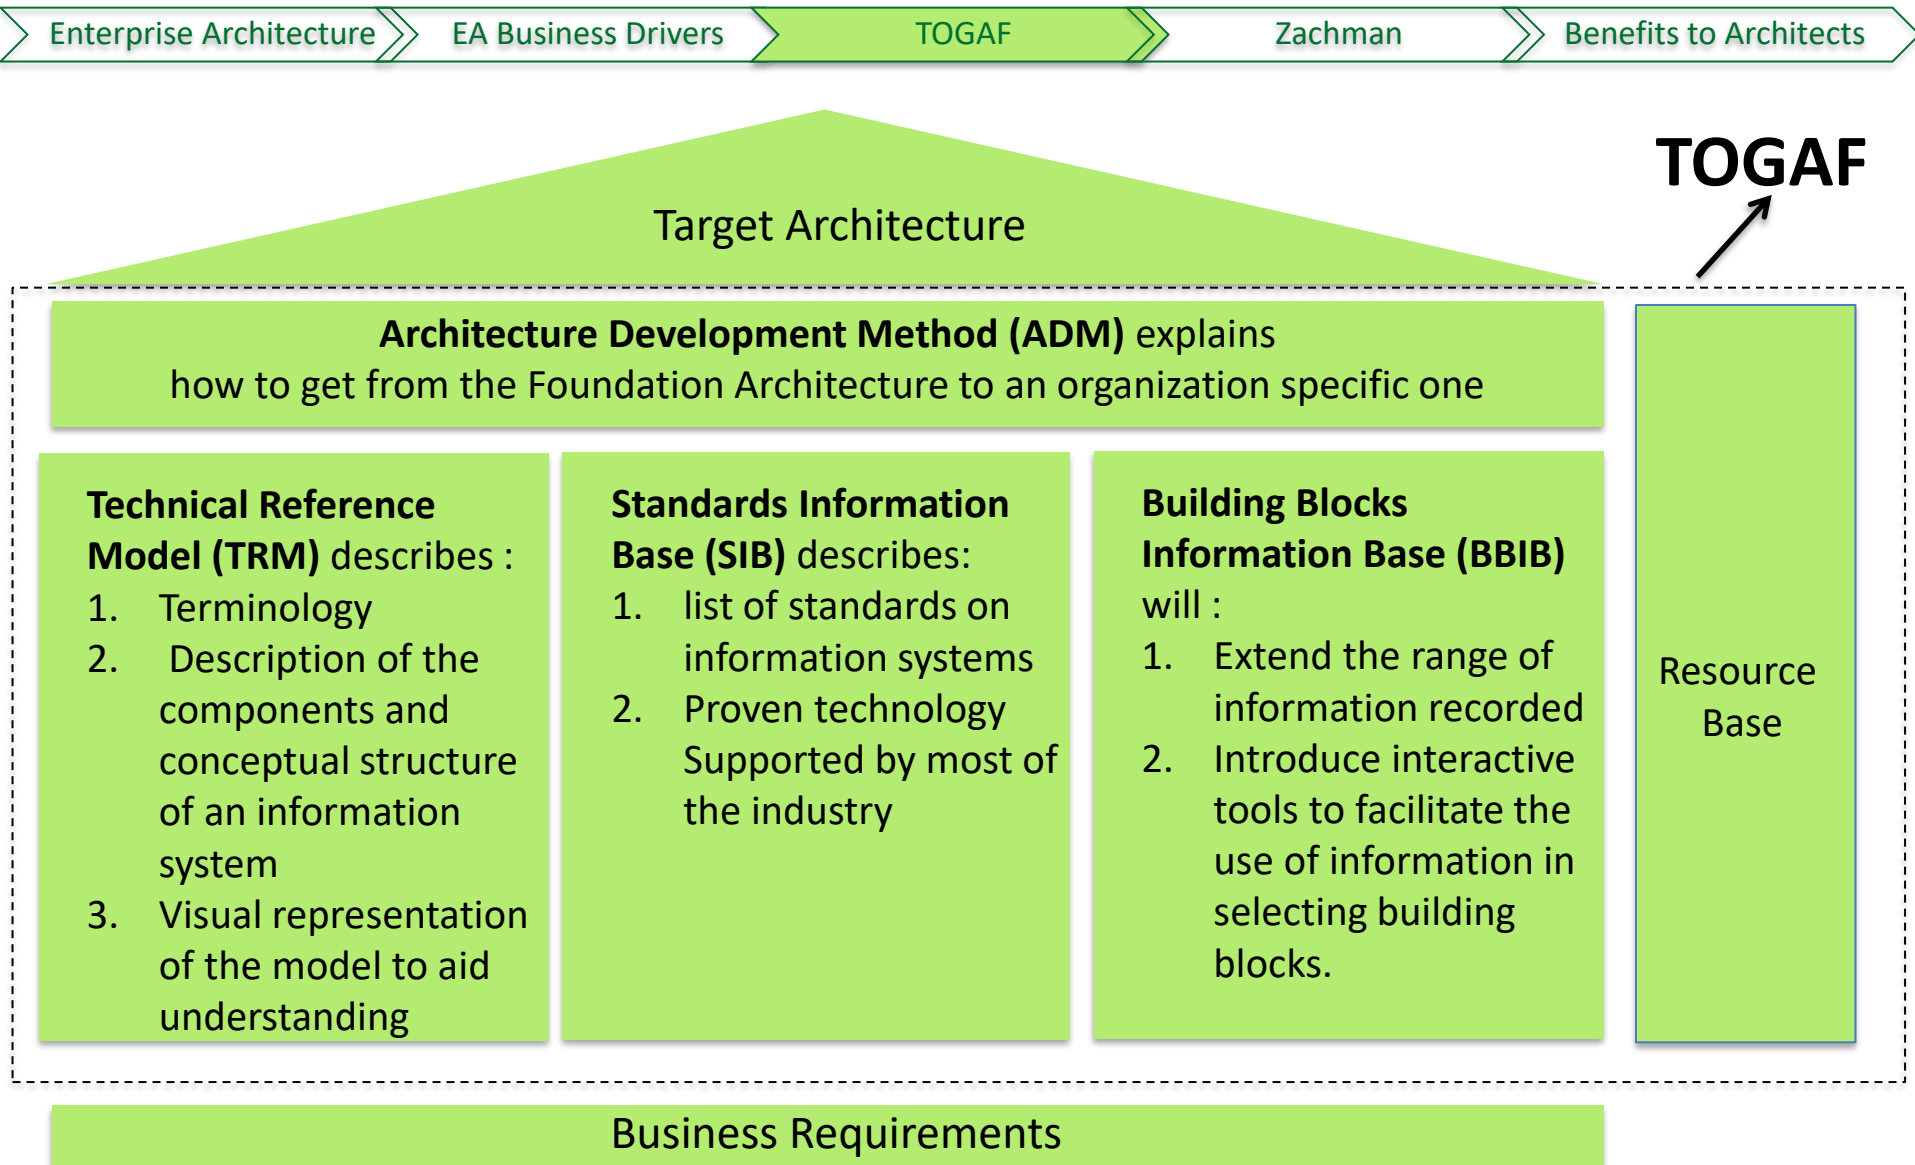

Enterprise Architecture is a **self-improvement** business function that **examines the structure and behavior of the socio-technical aspects** of an 'enterprise' and focuses on **opportunities to improve it**. It can be thought of as layers (shown in figure below)

How does an EA delivers 'Value'

TOGAF framework components

Zachman Framework Components

	WHAT	HOW	WHERE	WHO	WHEN	WHY
	DATA	FUNCTION	NETWORK	PEOPLE	TIME	MOTIVATION
SCOPE <i>(contextual)</i> Planner	List of Things Important to the Business	List of Processes the Business Performs	List of Locations in Which the Business Operates	List of Organizations Important to the Business	List of Events/ Cycles Significant to the Business	List of Business Goals/ Strategies
BUSINESS MODEL <i>(conceptual)</i> Owner	Semantic Models	Business Process Models	Business Logistics System	Work Flow Models	Master Schedule	Business Plan
SYSTEM MODEL <i>(logical)</i> Designer	Logical Data Models	Application Architecture	Distributed Systems Architecture	Human Interface Architecture	Processing Structure	Business Rule Model
TECHNOLOGY MODEL <i>(physical)</i> Builder	Physical Data Models	Systems Design	Technology Architecture	Presentation Architecture	Control Structures	Rule Designs
DETAIL REPRESENTATIONS <i>(out-of-context)</i> Subcontractor	Data Definitions	Software Programs	Network Architecture	Security Architecture	Timing Definitions	Rule Specifications

The Zachman Framework :

- Provides a **schema** for defining and viewing an enterprise
- Takes into account the **target audience** and the **issue** being addressed
- Consists of **cells** formed by intersection of 6 communication questions and 6 solution perspectives

Why should Architects adopt these Frameworks

Giving access to a set of best practices, tools and processes around typical problems

Technology/vendor agnostic which implies more options and a smoother learning curve

Allows architects to focus on architecture and not get bogged down in re-inventing artifacts and processes

Incorporates both business and technical needs thus lessening the need to convince business owners

Makes Architect's job easier

Has refined checklists for each and every stage thus leading to better traceability and less complexity

Saves Architect's time

Can be used with other frameworks making applications more scalable and reducing development time for iterative requirements

What is an EA Framework

EA Framework is a tool for

- Designing a broad range of architectures
- Assisting evaluation of different architectures
- Selecting and building the right architecture for an organization

Use of EA framework leads to

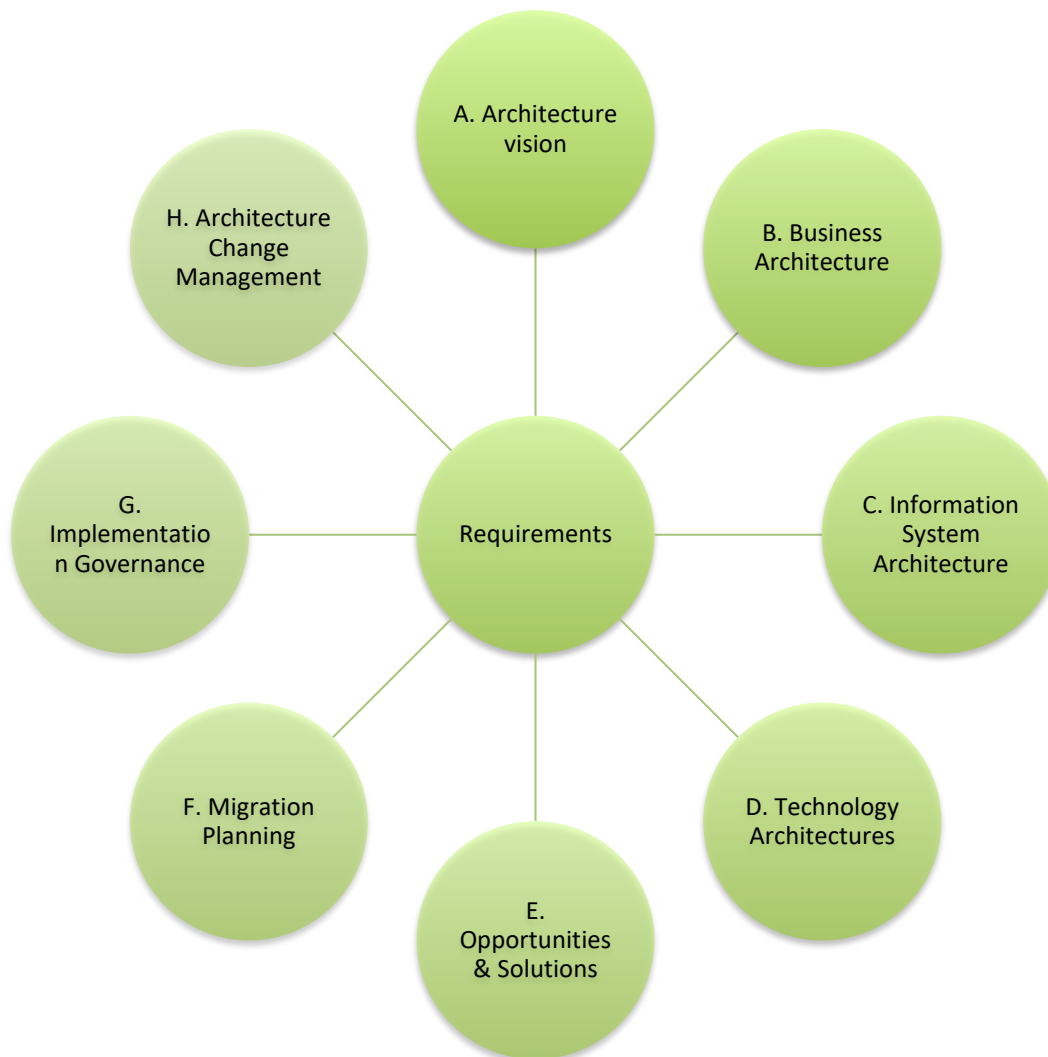

- Use of common principles, terminology & assumptions
- Development of Information systems with better integration and inter-operability

EA framework consists of

- Best practices and acknowledged wisdom
- Set of services standards, design concepts, components and configurations to describe and design an architecture

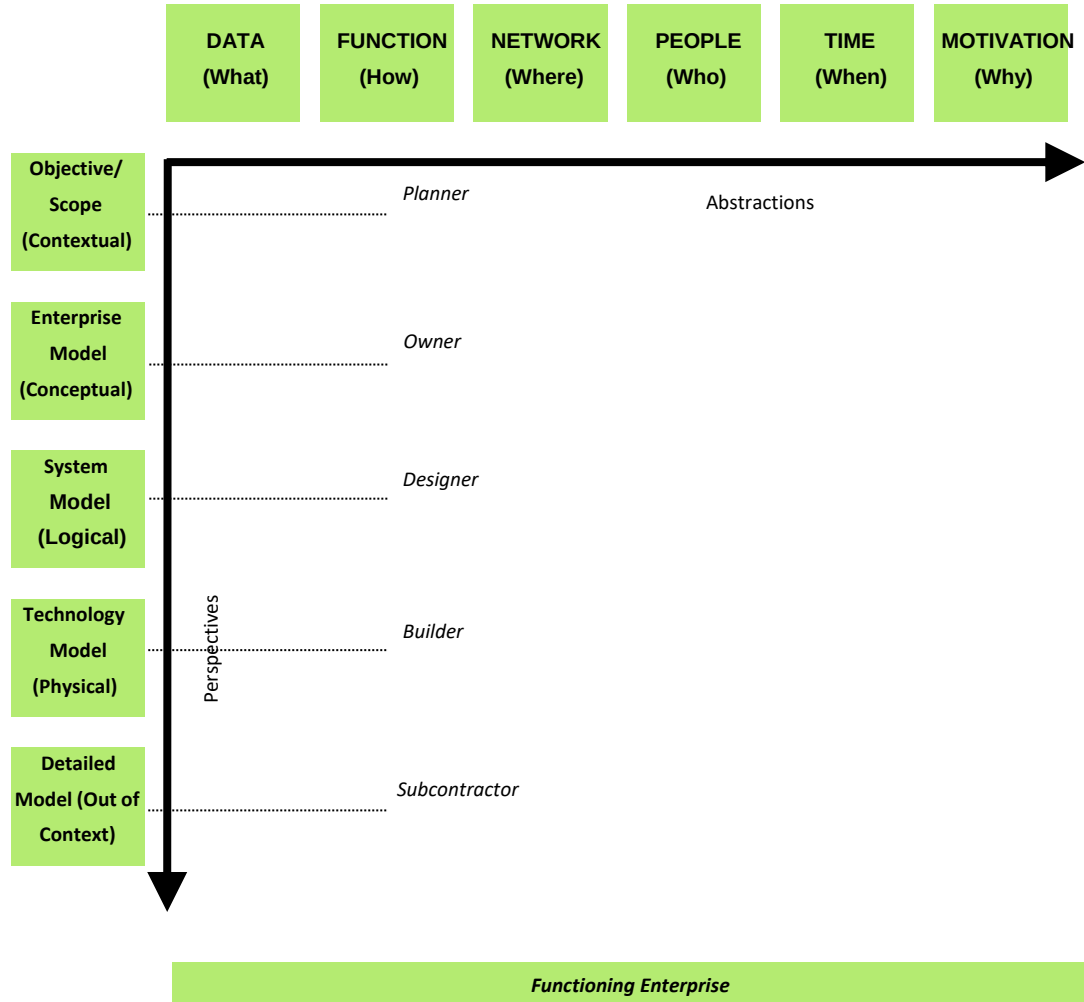

TOGAF and Zachman are 2 such architectures

TOGAF Architecture Development Method

- TOGAF ADM process consists of phases as described in the figure (A to H)
- Results in
 - Organization Specific Framework
 - More Reusable building blocks
- Each iteration becomes easier
- Uses SIB, TRM and BBIB

Conceptual description of Zachman Framework

The Zachman Framework consists of :

- **Rows** which provide the total view of the solution from a particular **perspective**
- **Columns** provide **focus** and capture all of the Enterprise's knowledge for the particular question being asked
- **Set of rules** governing relationship between rows and columns

By isolating each focus and defining each perspective within a cell, complete description of the Enterprise from that perspective is formed

TOGAF Business Drivers

Vendor, tool and technology independent

- Can be used with other architectural frameworks
- TOGAF is free-license for own use
- Can be used with existing technology and tools
- Reduces cost, increases ease of integration & development and reduces time-to-market

Generic, customizable framework

- Comprehensive process from business requirements to IT infrastructure
- Can be modified as per organizational needs and existing structures
- Can be used across the organization

Content framework & knowledge base

- Has repository of best practices that can be readily adopted
- Refined checklists at each stage for error free implementation

THANK YOU
